Correction. In the article “Isolation of amplified DNA sequences from IMR-32 human neuroblastoma cells: Facilitation by fluorescence-activated flow sorting of metaphase chromosomes” by N. Kanda, R. Schreck, F. Alt, G. Burns, D. Baltimore, and S. Latt, which appeared in number 13, July 1983, of Proc. Natl. Acad. Sci. USA (80, 4069–4073), the authors request that the following correction be noted. All hybrids described in Fig. 5 contained at least part of the human X chromosome, and the box for each hybrid in the column corresponding to the human X should have been darkened. This clerical error does not alter any conclusions in the paper.
