

Cover image: Pictured are dye-laden neurons from lobster and crab stomatogastric ganglia that were imaged with a confocal microscope and rendered using visualization algorithms. See the introductory article to the Quantification of Behavior Sackler Colloquium by Alan Leshner and Donald W. Pfaff on pages 15537–15541. Image courtesy of Dirk M. Bucher (The Whitney Laboratory for Marine Bioscience, University of Florida, St. Augustine, FL).

Supplement to the *Proceedings of the National Academy of Sciences of the United States of America*, which includes articles from the *Quantification of Behavior* Arthur M. Sackler Colloquium of the National Academy of Sciences. The complete program is available on the NAS Web site at www.nasonline.org/quantification.

Contents

INTRODUCTION

- 15537 **Quantification of behavior**
Alan Leshner and Donald W. Pfaff
→ Also see perspective on page 15037 in issue 37 of volume 108

COLLOQUIUM PAPERS

- 15542 **Variability, compensation, and modulation in neurons and circuits**
Eve Marder
- 15549 **Markov model of smoking cessation**
Peter R. Killeen
- 15557 **Second-generation high-throughput forward genetic screen in mice to isolate subtle behavioral mutants**
Vivek Kumar, Kyungin Kim, Chryshanthi Joseph, Lisa C. Thomas, Heekyung Hong, and Joseph S. Takahashi
- 15565 **Searching for simplicity in the analysis of neurons and behavior**
Greg J. Stephens, Leslie C. Osborne, and William Bialek
- 15572 **Quantification of developmental birdsong learning from the subsyllabic scale to cultural evolution**
Dina Lipkind and Ofer Tchernichovski

- 15580 **Quantifying the buildup in extent and complexity of free exploration in mice**
Yoav Benjamini, Ehud Fonio, Tal Galili, Gregor Z. Havkin, and Ilan Golani
- 15588 **Understanding vision in wholly empirical terms**
Dale Purves, William T. Wojtach, and R. Beau Lotto
- 15596 **Computational functions of neurons and circuits signaling injury: Relationship to pain behavior**
Lorne M. Mendell
- 15602 **Sex difference in the near-24-hour intrinsic period of the human circadian timing system**
Jeanne F. Duffy, Sean W. Cain, Anne-Marie Chang, Andrew J. K. Phillips, Mirjam Y. Münch, Claude Gronfier, James K. Wyatt, Derk-Jan Dijk, Kenneth P. Wright, Jr., and Charles A. Czeisler
- 15609 **Quantification of sleep behavior and of its impact on the cross-talk between the brain and peripheral metabolism**
Erin C. Hanlon and Eve Van Cauter
- 15617 **Quantitative descriptions of generalized arousal, an elementary function of the vertebrate brain**
Amy Wells Quinkert, Vivek Vimal, Zachary M. Weil, George N. Reeke, Nicholas D. Schiff, Jayanth R. Banavar, and Donald W. Pfaff
- 15624 **Architecture, constraints, and behavior**
John C. Doyle and Marie Csete

- 15631 **Mean-field modeling of thalamocortical dynamics and a model-driven approach to EEG analysis**
Jonathan D. Victor, Jonathan D. Drover, Mary M. Conte, and Nicholas D. Schiff
- 15639 **Structural equation models and the quantification of behavior**
Kenneth A. Bollen and Mark D. Noble

- 15647 **Understanding dopamine and reinforcement learning: The dopamine reward prediction error hypothesis**
Paul W. Glimcher
- 15655 **Temporal view of the costs and benefits of self-deception**
Zoë Chance, Michael I. Norton, Francesca Gino, and Dan Ariely
