

**Cover image:** Pictured is a male Eurasian bullfinch (*Pyrrhula pyrrhula*). Anna A. Torgasheva et al. found that germ cells of bullfinches and other songbirds contain an additional chromosome that is absent from somatic cells. The germline-restricted chromosomes are composed of highly duplicated genetic material partially homologous to the somatic chromosomes and may have evolved from a microchromosome in the common ancestor of songbirds. See the article by Torgasheva et al. on pages 11845–11850. Image courtesy of Elena P. Shnaider.
